RB as they are known now, or in the past, Reckitt Benckiser is a producer of health, hygiene and home products. Mostly a consumer products company, like a P&G. I assume worldwide sales are in the billions. They deal with OPP, more than OPPT. Of course they are very interested in the 1,4-d issues associated with consumer products.

Hope that helps.

d

Hey Gino

Phil is a consultant who works for Clorox and RB. He previously was the head of govt affairs for the Household and Commercial Products Association. Phil is very reasonable and easy to work with. In fact, has been an advocate for some of our programs. I don't know the processes in RAD about external contacts, but Phil is a reasonable and thoughtful person. I got the sense that they just needed clarification on some questions regarding Wheeler's animal testing policy announcement from last week.

Hope that helps.

Doug – hey; just got this note...could you tell me who Phil is? I probably need to go through channels to respond to him?

Thank.....

Gino

Doug Parson's thought you might be able to help me answer RBs questions below on the new animal testing policy. Is it possible to get clarity on these questions. Thanks Phil Klein, consultant for RB

On Sep 12, 2019, at 3:27 PM, Phil Klein { [Ex. 6 Personal Privacy \(PP\)](#) } wrote:

Doug

Are you able to answer Hal's questions below regarding the newest policy from administrator wheeler on potential impact? If not who handles this for epa in opp? There is some confusion. I read it as the agency is really moving to computer modeling versus requiring animal testing.

The plan approved by Wheeler said EPA will cut back on its requests for and spending on mammal studies by 30% by 2025 and eliminate all requests and funding for animal testing by 2035.

It seems like this is elimination of BOTH funding and actual testing. Correct? At ACI today, someone said this was just to reduce funding for testing and that EPA would still ask us to do the testing.

Could you get this clarified:

- Is this an end to funding of research or also to required testing?
- just for TSCA PMN's or also pesticides?
- just mammal studies and not insects/fish studies?

Thanks,

~ hal

EPA to eliminate funding for animal testing by 2035

Environmental Protection Agency Administrator Andrew Wheeler on Tuesday ordered the agency to reduce funding for animal testing by 30% by 2025 and to eliminate it by 2035. Alternative testing options "have the potential to save hundreds of animals while providing more accurate information on chemical hazards, exposures and risks," says the American Chemistry Council.

States turn to legislation to solve recycling issues

China's ban on many types of imported waste has forced states to look for new markets for recyclables, and at least 10 have enacted or passed recycling-related legislation this year. Washington state is creating a Recycling Development Center, while California wants to make cities' recycling programs more consistent.
